

Eactalk Project White Paper

Ver 1.0

Disclaimer: This project does not issue coins, no IXO, no headhunting, no rebates, no agents, no distribution, non-Defi, non-Gamefi. It is to explore whether blockchain technology can serve real life by developing universal applications, as Satoshi Nakamoto said this is a social experiment, maybe success, maybe failure, but we are already on the way.

Please refer to the Chinese version as the translation may not be accurate due to the limited English level.

I. Earthcoin Introduction

Earthcoin (EAC) is a global cryptocurrency based on the scrypt algorithm and dedicated to sustainability and equity, launched on December 20, 2013 in Toronto, Canada. It is a new generation scrypt cryptocurrency, an extension of Litecoin. Similar to Litecoin – uses the scrypt proof-of-work mechanism. Earthcoin is a revolutionary and unique digital currency that is rapidly growing in popularity, and its founders believe that cryptocurrencies have the potential to change the world. The appeal of Earthcoin clearly comes from its marketing experience, history of stable operation and wide acceptance. The underlying technology of Earthcoin has addressed some of the early flaws of cryptocurrencies.

Total volume: 13.5 billion, using pow algorithm mechanism, block speed 60 seconds, core algorithm scrypt. mining method supports auxpow (joint mining), supports combined mining with doge and ltc.

II. Eactalk Project Introduction

eactalk is a metaverse information publishing social web3.0 application developed based on earthcoin blockchain, with web3.0 attributes such as strong anonymity, no registration, no account (address is account), no audit, no management, no tampering, no deletion, permanent on-chain, user ownership of information, customizable nodes, and both eac wallets. **eactalk has been awarded the software copyright certificate of the National Copyright Administration of China, Soft Registration No. A0004023. The related implementation method has been submitted for patent protection and accepted.**

Official website:<https://www.eactalk.com>;

Open source:<https://github.com/vcexnet/eactalk>

2.1. Objective: To build a blockchain version of web3.0 Twitter and Weibo, integrating the functions of telegraph and Twitter and Weibo. Let freedom of speech without borders, everyone is born equal, not because of the amount of resources control disguised to deprive others of the right to voice, anyone has the right to speak, no matter right or wrong!

2.2. Method: eactalk, like all other blockchain projects, adopts the industry's common open source licensing method in order to maximize the development of the project, allow more blockchain developers to participate in the project, and make the project open and transparent.

2.3. Principle: send information to the chain by sending token on the earthcoin blockchain, and then achieve the purpose of releasing information, so eactalk is the app that is paid to release information.

2.4. Functions: Publish four major categories of information, all four categories can be freely browsed and viewed as long as eactalk is installed; send peer-to-peer messages, similar to private messages, but visible on the blockchain, provide encryption options, and unreadable on the blockchain after encryption. All actions on eactalk are anonymous and have nothing to do with the real identity of the message sender.

2.5. Features.

2.5.1. The whole system is decentralized, with no management backend. eactalk only obtains and organizes information from the earthcoin blockchain.

2.5.2. No registration is required and no realistic identification information (including but not limited to name, social security number, cell phone number, email, whatsapp, passport ID, Twitter account, facebook account, etc.) is required to achieve strong anonymity, while supporting self-identification.

2.5.3, using earthcoin blockchain address as an account, globally unique, can't be forged, no one can block or shield. Paper key is the only proof of account ownership, remember the paper key including the order, information and eac assets are never lost.

2.5.4. Information is decentralized, unmanaged, cannot be tampered with, cannot be deleted and edited, and is permanently on the chain. The chain is the information. Ownership of information belongs to the user.

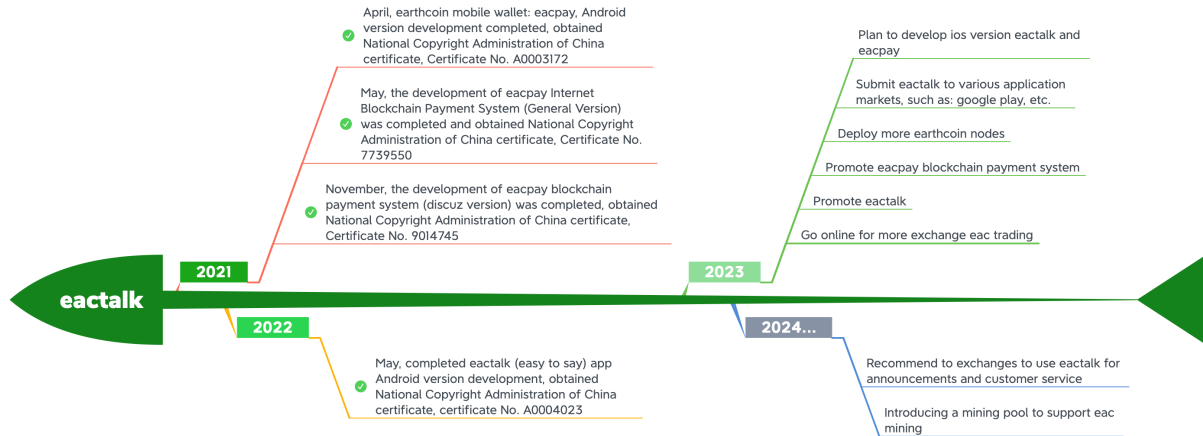

2.5.5. All information is publicly visible, and the best secrecy is public. Peer-to-peer messages provide encryption optional, support message and attachment encryption.

2.5.6, information supports a maximum of 252 characters, pictures, audio and video attachments support ipfs way of storage.

2.5.7. Automatically adapts to mainstream global languages and supports automatic translation to ensure the effectiveness of information dissemination.

2.5.8. No centralized nodes, nodes can be customized to connect self-built or trusted earthcoin blockchain nodes, direct access to earthcoin, ipfs.

III. Eactalk Road Map

IV. Eactalk Promotion Program

Principle: Promote with rewards, use eac as a reward, and all eac holders and eactalk users build and share together to realize the purpose of crowd paddling to drive a big boat.

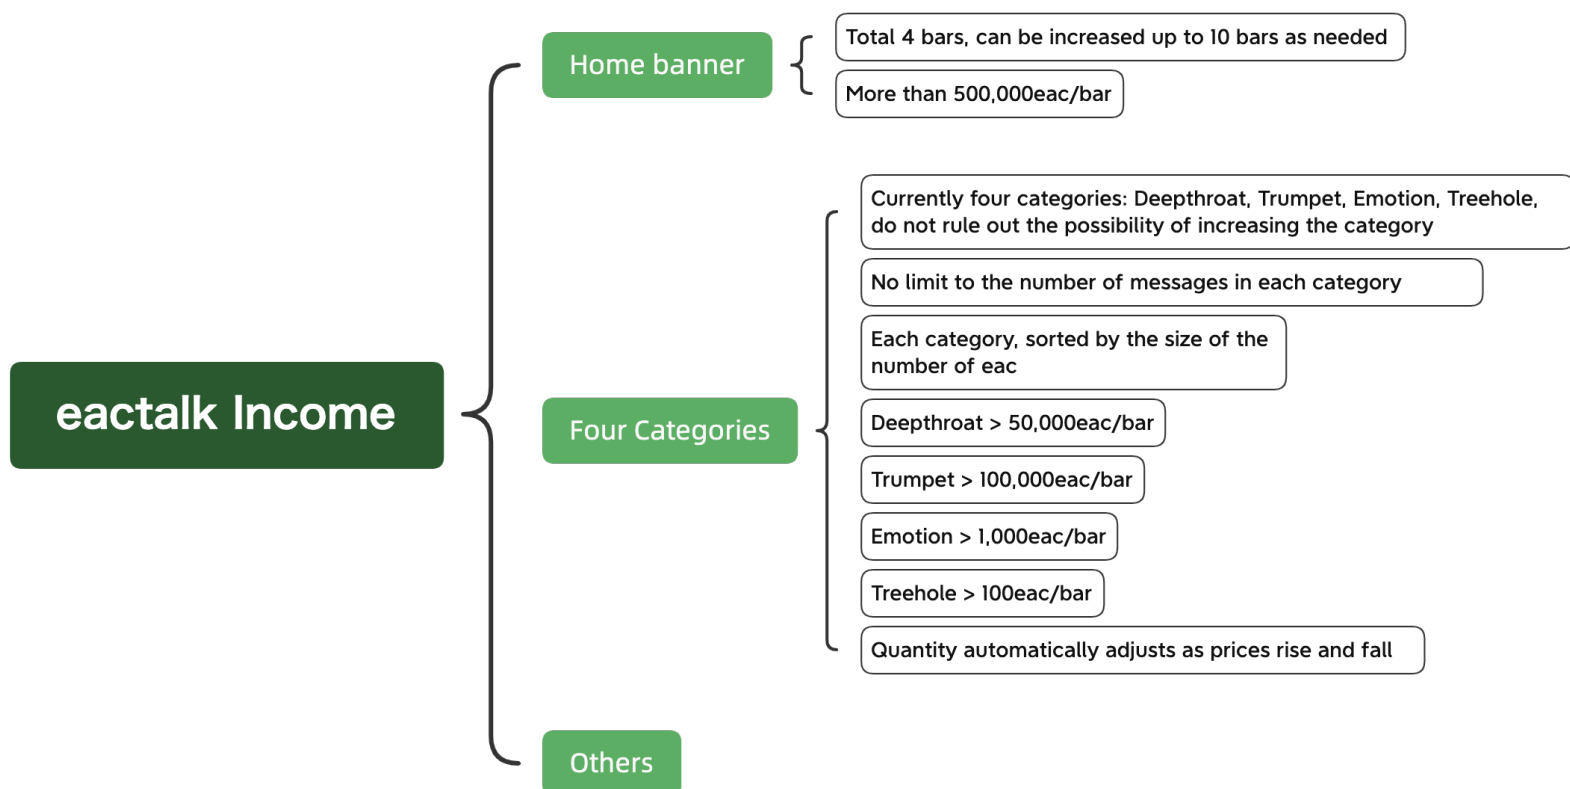

According to the different promotion channels, each channel is divided into different promotion coefficients, and the promoters get promotion rewards according to the promotion quantity * promotion coefficient.

The program is carried out by the community providing eactalk materials such as copywriting and video, mainly blockchain media, combined with self media, short video, wechat, qq, Twitter, telegraph, reddit, etc. as auxiliary, and carried out simultaneously at home and abroad. Still the community promotion group is responsible for the overall management and promotion. The promotion group is responsible for the collection management of promoters, promotion record statistics, promotion reward statistics and sending promotion fund managers to ensure the authenticity and validity of promotion records.

Channel Name	Channel Key Members	Promotion Method	Promotion factor(eac)
Blockchain Media	8btc, jinse, feixiaohao, chain node, chain catcher, Wu said blockchain, bitcointalk, etc., see attachment	Posting, posting articles, replies, signatures, avatars, etc.	1000–5000
Short videos	bilibili,kuaishou,tiktok,etc.	Send a short video, see material library	500–1000

Channel Name	Channel Key Members	Promotion Method	Promotion factor(eac)
Self-Media	zhihu,weibo,Twitter,facebook,Little Red Book, etc.	Posting, blogging, and blogging back (try to reply to well-known bloggers in the circle)	100-500
IM tools	WeChat, qq, friend circle, qq space, whatsapp, instagram, etc.	Friend circle, qq space posting	50
Social Groups	wechat group,qq group	Build groups, pull people	10-20
Live Broadcast	Various Live Streams	Explain the features of eactalk, its usage, etc. about eactalk or eacpay or earthcoin knowledge of eacpay and earthcoin	5000起
Foreign countries	Telegram, Twitter, facebook, discord, Reddit, etc.	Post relevant content or material to the appropriate platform and respond to relevant community information in a timely manner	500-3000

V. Eactalk Income

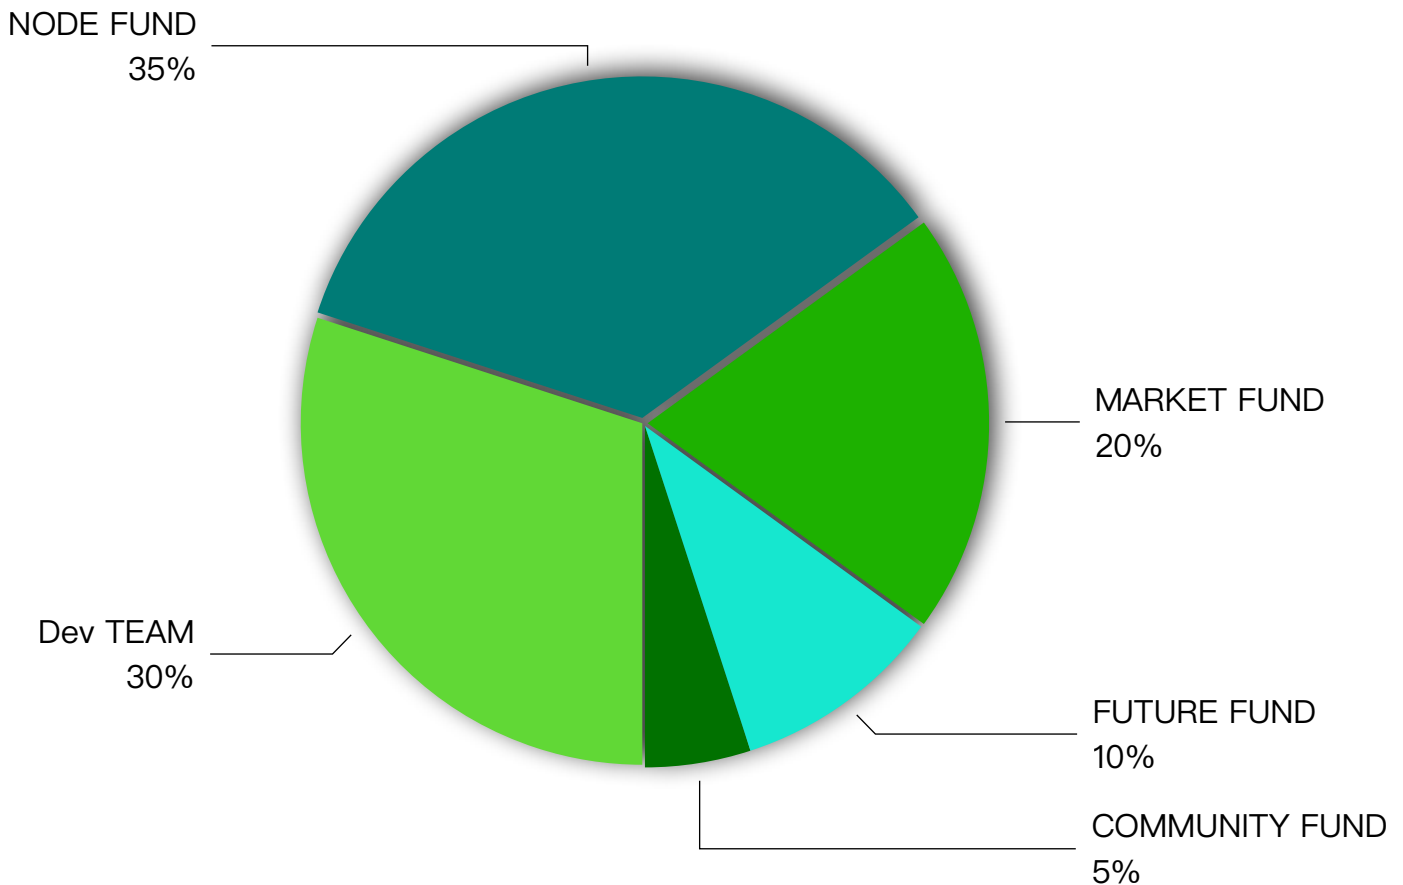

VI. Eac Distribution Plan

6.1, distribution part: all based on eactalk generated all income, including but not limited to the home page 4 categories of information (respectively, 100,000 eac,

50,000 eac, 0.1 million eac, 0.01 eac million each) + home banner (500,000 eac / bar, a total of 4 bars), the number of home 4 categories will fluctuate with the change of eac price.

6.2. Distribution of related parties:

Participation in the distribution of related parties	Distribution share (of total revenue)
Development TEAM	30%
NODE FUND	35%
MARKET FUND	20%
FUTURE FUND	10%
COMMUNITY FUND	5%

6.3. Distribution cycle: According to the progress of promotion and the amount of users and frequency of use, the nodes will be allocated once a day, once a week or once a month, and the node team will be allocated internally according to the online rate of each node. Ensure the availability of the nodes, each allocation cycle found

more than 3 times (including 3 times), the nodes can not be used normally will not be allocated rewards. Node online detection technology will be used to record.

6.4. Distribution formula

Income per node = (total income in the allocation cycle * 35% / total number of nodes) * node online rate. Node online rate = node online hours / allocation cycle hours (hours),

Income per promoter = quantity * channel coefficient +...+ quantity * channel n coefficient. Channels mainly include: wechat group 10, friend circle 20, qq group 10, qspace 20, microblog 50, blog 50, tweet 50, telegraph 50, facebook 50, self media 100–500 (Zhihu, Xiaohongshu, Sohu), short video 500 (Racer, Jitterbug, Beeping, etc.), industry media 1000–5000 (golden finance, bit finance, coin World, Chaintech, Babbitt, 9 billion finance, reddit, etc.), live broadcast from 5000, etc.

The node fund is directly allocated by all valid participating nodes during the allocation period, without reservation or accrual.

The promotion fund is managed by a person elected by the community, and the fixed receiving address is open for supervision. The promotion reward is distributed by the promotion group leader who summarizes the promotion details and provides the distribution details, and the promotion fund manager and the promotion group leader cannot be the same person.

The community fund is managed by a person elected by the community, with a public fixed receiving address, and is subject to supervision.

Future funds will be received by the development team using a designated address and will be monitored.

The development team is the eactalk development team.

VII. Disclaimers

This white paper is intended to provide general information relating to the Program only and should not be construed or interpreted in any way to constitute a prospectus, securities indenture, investment promotion or any contract relating to the sale of any products, goods or assets.

The information set forth in this white paper may not be fully exhaustive and the existence of any contractual relationship is not implied.

No warranty is given as to the accuracy or completeness of the information set forth in this White Paper, and no representation, warranty or undertaking is made and is intended to be made as to the accuracy or completeness of such information.

This white paper contains information obtained from third party sources, and the eactalk team has not independently verified the accuracy or completeness of such information. In addition, objective circumstances relating to this white paper may change and, as a result, this white paper may be out of date or out of date, and the

eactalk team is not obligated to promptly update or correct this document in light of such circumstances.

This White Paper shall not constitute a contract issued by eactalk Team in connection with the purchase or sale of any eac. Also, neither this White Paper nor any part of it or the presentation of it shall form the basis of any contract or investment decision and shall not be the basis for entering into any contract or making any investment decision.

nothing in this white paper is intended as a promise, representation or commitment as to the future performance of the eactalk team. the eactalk team currently makes, and does not plan to make, and hereby disclaims any representations, warranties or commitments to any entity or person (including, without limitation, any warranty as to the accuracy, completeness, timeliness or reliability of the content of this white paper and any other materials published by the eactalk team). timeliness or reliability). to the fullest extent permitted by law, for any indirect, special, incidental, consequential or other damages of any kind (whether in tort, contract or otherwise, including, without limitation, any liability for your own breach or negligence, or for any loss of revenue, loss of income or loss of profits) arising out of or in connection with the use of this white paper, any other material published and the content of the other material The team and its related partners and service providers shall not be liable for any loss of revenue, loss of income or loss of profits, and loss of use or loss of data, etc.).
